PROFESSIONAL SUMMARY

Full-stack developer who ships web apps end to end with React, Node.js, Express, and MongoDB — secure REST APIs, JWT/RBAC auth, Docker, and CI/CD. Built and deployed ScribeOS (an AI SaaS with an async job queue + RAG) and a live civic platform with a full PostgreSQL→MongoDB migration.

SKILLS

- **Frontend:** React, Vite, React Router, Axios, JavaScript (ES6+), HTML, CSS, Responsive UI
- **Backend:** Node.js, Express, REST APIs, JWT, bcrypt, Mongoose, Redis, BullMQ
- **Databases:** MongoDB, PostgreSQL, SQL
- **AI Engineering:** RAG, Vector Search, Embeddings, LLM Integration, Prompt Engineering, Python, scikit-learn
- **DevOps & Cloud:** Docker, docker-compose, GitHub Actions, Vercel, Render, MongoDB Atlas, Git, nginx

PROJECTS

ScribeOS — AI Customer-Feedback Intelligence SaaS
React · Node.js · Express · MongoDB Atlas · Redis · BullMQ · Vector Search · RAG — Live | Code

- Designed and **deployed a production full-stack AI SaaS end to end** (React · Node.js · Express · MongoDB) — JWT/bcrypt auth, ownership-scoped CRUD, and a read-only guest demo (Vercel + Render).
- Engineered an **async AI pipeline (Redis + BullMQ)**: slow ~4s LLM calls run in a separate worker with retry/backoff, so the API responds instantly instead of blocking the user.
- Integrated **schema-constrained LLM output** (Groq) to auto-tag feedback with sentiment, themes, and summaries — turning unreliable prose into typed data.
- Built a **RAG "Ask Your Data" feature** — MongoDB Atlas Vector Search grounds the LLM's answer in the user's own feedback, returning plain-English answers with cited sources.

Gov-Dash — Full-Stack Civic Governance Dashboard
React · Node.js · Express · MongoDB · JWT · Docker — Live | Code

- Engineered a full-stack app (React · Node.js · Express · MongoDB; secure REST API, full CRUD) for citizens to file grievances on an interactive map and staff/admins to triage — **JWT + role-based access control** (citizen/staff/admin), bcrypt, and fixes for a login backdoor and a privilege-escalation vulnerability.
- Migrated the entire backend from **PostgreSQL to MongoDB**, rebuilding the data layer, models, and every query with no feature loss.
- Containerized frontend and backend with **Docker** (multi-stage build + nginx) and docker-compose; built a **Git Hub Actions CI pipeline** and deployed to Vercel, Render, and MongoDB Atlas.

NoteBoard — Full-Stack Notes Application
React · Vite · Express · MongoDB · Multer — Code

- Built a full CRUD notes/photo-board with image uploads, modal edit/delete, a responsive grid, and automatic dark mode, backed by an Express REST API and MongoDB/Mongoose.

Loan Default Predictor — Deployed ML Web App
Python · scikit-learn · Streamlit · LLM API — Live | Code

- Engineered an end-to-end ML product: a logistic-regression model trained on 1.3M loans, served through a live app that scores default risk and explains each prediction in plain English via an LLM.

EXPERIENCE

Barista Trainer — Starbucks India | Pune, India | Dec 2022 – Jun 2025

- Trained 3+ team members and handled 100+ transactions/shift with zero cash discrepancies — precision, reliability, and ownership now applied to shipping software.

EDUCATION

Bachelor of Computer Applications (BCA) — Dr. Vishwanath Karad MIT World Peace University, Pune

- Relevant Coursework: Web Development, DBMS, Data Structures, OOP, Operating Systems
