PROFESSIONAL SUMMARY

Full-stack developer with hands-on experience building and shipping web applications end to end on the MERN stack (MongoDB, Express, React, Node.js). Skilled at designing secure REST APIs, implementing JWT authentication with role-based access control, containerizing services with Docker, and deploying to production with CI/CD. Recently built and deployed a live civic-governance platform, including a full PostgreSQL-to-MongoDB backend migration. Seeking full-stack / web developer roles.

SKILLS

- **Core Competencies:** Full-Stack Development, REST API Design, Authentication & Authorization (JWT / RBAC), CI/CD, Containerization, Database Schema Design
- **Frontend:** React, Vite, React Router, Axios, JavaScript (ES6+), HTML, CSS, Responsive UI
- **Backend:** Node.js, Express, REST APIs, JWT, bcrypt, Mongoose
- **Databases:** MongoDB, PostgreSQL, SQL
- **AI Engineering:** RAG, Vector Search, Embeddings, LLM Integration, Prompt Engineering, scikit-learn
- **DevOps & Cloud:** Docker, docker-compose, GitHub Actions, Redis, BullMQ, Vercel, Render, MongoDB Atlas, Git, nginx
- **Also:** Python, Power BI, Tableau, Machine-Learning basics

PROJECTS

ScribeOS — AI Customer-Feedback Intelligence SaaS

React · Node.js · Express · MongoDB Atlas · Redis · BullMQ · Vector Search · RAG — [Live](#) | [Code](#)

- Designed and **deployed a production MERN + AI SaaS end to end** — JWT auth with bcrypt, ownership-scoped CRUD, and a read-only guest demo — live on Vercel (React) and Render (API & worker).
- Engineered an **async AI pipeline with Redis + BullMQ**: slow (~4s) LLM calls run in a separate worker process with retry and exponential backoff, so the API responds instantly instead of blocking the user.
- Integrated **schema-constrained LLM output** (Groq) to auto-tag each feedback item with sentiment, themes, and a one-line summary — turning unreliable prose into typed, storable data.
- Built a **RAG "Ask Your Data" feature** — MongoDB Atlas Vector Search retrieves the most relevant feedback and grounds the LLM's answer in it, returning plain-English answers with cited sources and similarity scores.

Gov-Dash — Full-Stack Civic Governance Dashboard

React · Node.js · Express · MongoDB · JWT · Docker — [Live](#) | [Code](#)

- Engineered a full MERN application where citizens file grievances on an interactive map and staff/admins triage them, secured with **JWT authentication** and **role-based access control** (citizen / staff / admin).
- Architected a secure REST API (full CRUD) with Express and Mongoose; hashed credentials with bcrypt and removed a login backdoor and a privilege-escalation vulnerability.
- Migrated the entire backend from **PostgreSQL to MongoDB**, rebuilding the data layer, models, and every query with no feature loss.
- Containerized frontend and backend with **Docker** (multi-stage build + nginx) and docker-compose; built a **Git Hub Actions CI pipeline** and deployed to Vercel, Render, and MongoDB Atlas.

NoteBoard — MERN Notes Application

React · Vite · Express · MongoDB · Multer — [Code](#)

- Built a full CRUD notes/photo-board with image uploads, modal edit/delete, a responsive grid, and automatic dark mode, backed by an Express REST API and MongoDB/Mongoose.

Loan Default Predictor — Deployed ML Web App

Python · scikit-learn · Streamlit · LLM API — [Live](#) | [Code](#)

- Engineered an end-to-end ML product: a logistic-regression model trained on 1.3M loans, served through a live app that scores default risk and explains each prediction in plain English via an LLM.

EXPERIENCE

Barista Trainer — Starbucks India | Pune, India | Dec 2022 – Jun 2025

- Trained and onboarded 3+ new team members and handled 100+ transactions per shift with zero cash-handling discrepancies — the precision, reliability, and ownership now applied to shipping software.

EDUCATION

Bachelor of Computer Applications (BCA) — Dr. Vishwanath Karad MIT World Peace University, Pune

- Relevant Coursework: Web Development, Database Management Systems, Data Structures, Object-Oriented Programming, Operating Systems
